

Unlock Unstructured Data

DataScava turns your unstructured textual content into highly precise industry-specific information you can act on, **delivering verifiable results fast.**

It works on its own or with AI, Machine Learning and other data-driven systems to help you confront the explosive growth of unstructured data with greater accuracy, speed and context.

DataScava finds, indexes, scores and matches data points for use in data curation, prediction engines, business analytics, production systems, matching technologies and more.

The system keeps the Human in Command using a patented white-box approach and proprietary Weighted Topic Scoring you can see, control and measure.

Our domain-specific Non-Semantic Data Parser uses your business language, not generalized NLP and Semantic libraries, and is fully customizable.

The Benefits

- Identify opportunities for data monetization and mining to maximize data investments.
- Make business decisions that correspond directly to what your data is telling you.
- Identify data for use as training data for AI/ML and in other data-driven systems
- Gain insights and visibility to support business demands and ensure compliance.

Weighted Topic Scoring
